

# JOHN "EMMET" ANDREWS

Los Angeles, CA (open to relocation) | US Citizen / Canadian Citizen

(520) 237-1222 | [emmet.andrews.2026@anderson.ucla.edu](mailto:emmet.andrews.2026@anderson.ucla.edu)

<https://www.linkedin.com/in/emmet-andrews/> | <https://github.com/emmetand>

## EDUCATION

### UCLA ANDERSON SCHOOL OF MANAGEMENT

Los Angeles, CA

#### *Master of Science in Business Analytics (MSBA)*

Expected Dec 2026

- Relevant Coursework: Entertainment Analytics, Project Management, Machine Learning for Decision Making, Data Management, Cloud Data Infrastructure, Prescriptive Models, Experimental Design & Causal Inference, Customer Analytics, Data Visualization

### UNIVERSITY OF ARIZONA

Tucson, AZ

#### *BS, Molecular and Cellular Biology / Ecology and Evolutionary Biology (Cum Laude w/ Honors)*

May 2016

- 2-semester Honors research thesis leading to co-authorship of biochemical network analysis publication ([LINK](#)).
- Awards: UBRP research fund recipient, Wildcat Excellence Tuition Award, Outstanding Senior Research nominee.

## SKILLS

**Programming & Tools:** Python (pandas, NumPy, scikit-learn, statsmodels), SQL (MySQL, DuckDB), R, Jupyter, Tableau, Power BI, dbt, Azure, Git/GitHub, Dash

**Machine Learning & Predictive Analytics:** Regression, Classification, Clustering, Feature Engineering, Model Evaluation, Forecasting, Time Series Analysis, Predictive Modeling

**Experimentation & Statistics:** A/B Testing, Experimental Design, Hypothesis Testing, Statistical Inference, Causal Analysis

**Data Analytics & Business Intelligence:** Data Storytelling, Dashboarding, User Segmentation, Audience Insights, Business Strategy,

**Data Engineering & Infrastructure:** ETL Pipelines, API Integration, Data Cleaning, Data Warehousing, Cloud Data Infrastructure

## PROFESSIONAL EXPERIENCE

### NASA (National Aeronautics and Space Administration)

Pasadena, CA

#### *Data Science Graduate Intern*

June 2026 - Sept 2026

- Built an end-to-end medallion pipeline (Python/SQL/Dagster) with automated update sensors that turns researchers' requests for wind-tunnel and flight-test time into decision-ready demand forecasts across 20+ facilities,
- Shipped a self-serve rollup dashboard (Dash + AG Grid Enterprise) that lets stakeholders drill demand hours through a four-level hierarchy and slice by scientific and project interests. Delivered on-demand data reports directly from the data pipeline.
- Designed a historical-demand dashboard for analyzing and comparing demand across multiple fiscal years, surfacing year-over-year trends and shifts in utilization for 20+ facilities to inform capacity planning.
- Developed a capacity-allocation and utilization model that forecasts demand against finite capacity and surfaces near-, mid-, and long-term saturation risk across facilities.

### LEGENDARY STUDIOS

Burbank, CA

#### *Development Executive (contract role)*

Jan 2022 - Aug 2025

- Analyzed high-volume performance metrics and audience engagement data to improve project development.
- Conducted market and genre analysis to identify emerging growth segments in adult animation, influencing new IP investments and franchise strategy across streaming and linear platforms.
- Prepared presentations and insights for executive stakeholders, translating data analysis and creative development into actionable recommendations for content strategy.

### FOX ENTERTAINMENT

Los Angeles, CA

#### *Coordinator, Animated TV Series*

July 2019 - Jan 2022

- Delivered insights and strategic recommendations that shaped greenlight decisions and optimized Fox's animated content slate; personal presentations to executives led to new initiatives in animation outsourcing and cost efficiency.
- Identified performance trends using Nielsen ratings and market competition viewership, recommending strategic content adjustments and maximizing audience engagement.
- Coordinated full development cycle of 30+ animated series, aligning network brand requirements with multiple creative partners and stakeholders, ensuring strict deliverable deadlines were met for linear television airdates.

## PROJECTS

**Film Recommendation Engine (Python):** Built a Python-based recommendation engine (cosine similarity, scikit-learn) on a 650K-user dataset to predict content affinity, simulating content personalization systems, applying ML techniques relevant to user retention and recommender systems.

**Customer Retention Dashboard (SQL + Tableau):** Designed SQL + Tableau dashboard analyzing customer churn dynamics to surface retention levers, demonstrating methods applicable to audience engagement and viewership analysis.
